General Certificate of Education  
Advanced Level Examination  
June 2015

# Mathematics

**MPC4**

**Unit Pure Core 4**

**Tuesday 9 June 2015 9.00 am to 10.30 am**

**For this paper you must have:**

- the blue AQA booklet of formulae and statistical tables.
- You may use a graphics calculator.

**Time allowed**

- 1 hour 30 minutes

**Instructions**

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- Write the question part reference (eg (a), (b)(i) etc) in the left-hand margin.
- You must answer each question in the space provided for that question. If you require extra space, use an AQA supplementary answer book; do **not** use the space provided for a different question.
- Do not write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

**Information**

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 75.

**Advice**

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

Answer **all** questions.

Answer each question in the space provided for that question.

- 1** It is given that  $f(x) = \frac{19x - 2}{(5 - x)(1 + 6x)}$  can be expressed as  $\frac{A}{5 - x} + \frac{B}{1 + 6x}$ , where  $A$  and  $B$  are integers.

- (a) Find the values of  $A$  and  $B$ .

[3 marks]

- (b) Hence show that  $\int_0^4 f(x) \, dx = k \ln 5$ , where  $k$  is a rational number.

[6 marks]

QUESTION  
PART  
REFERENCE

**Answer space for question 1**

QUESTION  
PART  
REFERENCE**Answer space for question 1****Turn over ►**

- 2 (a)** Express  $2 \cos x - 5 \sin x$  in the form  $R \cos(x + \alpha)$ , where  $R > 0$  and  $0 < \alpha < \frac{\pi}{2}$ , giving your value of  $\alpha$ , in radians, to three significant figures.

[3 marks]

- (b) (i)** Hence find the value of  $x$  in the interval  $0 < x < 2\pi$  for which  $2 \cos x - 5 \sin x$  has its maximum value. Give your value of  $x$  to three significant figures.

[2 marks]

- (ii)** Use your answer to part **(a)** to solve the equation  $2 \cos x - 5 \sin x + 1 = 0$  in the interval  $0 < x < 2\pi$ , giving your solutions to three significant figures.

[3 marks]

QUESTION  
PART

QUESTION  
PART  
REFERENCE**Answer space for question 2****Turn over ►**

- 3 (a)** The polynomial  $f(x)$  is defined by  $f(x) = 8x^3 - 12x^2 - 2x + d$ , where  $d$  is a constant. When  $f(x)$  is divided by  $(2x + 1)$ , the remainder is  $-2$ . Use the Remainder Theorem to find the value of  $d$ .

[2 marks]

- (b)** The polynomial  $g(x)$  is defined by  $g(x) = 8x^3 - 12x^2 - 2x + 3$ .

- (i)** Given that  $x = -\frac{1}{2}$  is a solution of the equation  $g(x) = 0$ , write  $g(x)$  as a product of three linear factors.

[3 marks]

- (ii)** The function  $h$  is defined by  $h(x) = \frac{4x^2 - 1}{g(x)}$  for  $x > 2$ .

Simplify  $h(x)$ , and hence show that  $h$  is a decreasing function.

[4 marks]

QUESTION  
PART  
REFERENCE**Answer space for question 3****Turn over ►**

**4 (a)** Find the binomial expansion of  $(1 + 5x)^{\frac{1}{5}}$  up to and including the term in  $x^2$ . **[2 marks]**

**(b) (i)** Find the binomial expansion of  $(8 + 3x)^{-\frac{2}{3}}$  up to and including the term in  $x^2$ . **[3 marks]**

**(ii)** Use your expansion from part **(b)(i)** to find an estimate for  $\sqrt[3]{\frac{1}{81}}$ , giving your answer to four decimal places.

**[2 marks]**

QUESTION

REFERENCE

**Answer space for question 4**

QUESTION  
PART  
REFERENCE**Answer space for question 4****Turn over ►**

**5** A curve is defined by the parametric equations  $x = \cos 2t$ ,  $y = \sin t$ .

The point  $P$  on the curve is where  $t = \frac{\pi}{6}$ .

**(a)** Find the gradient at  $P$ .

**[3 marks]**

**(b)** Find the equation of the normal to the curve at  $P$  in the form  $y = mx + c$ .

**[3 marks]**

**(c)** The normal at  $P$  intersects the curve again at the point  $Q(\cos 2q, \sin q)$ .

Use the equation of the normal to form a quadratic equation in  $\sin q$  and hence find the  $x$ -coordinate of  $Q$ .

**[5 marks]**

QUESTION  
PART

**Answer space for question 5**

QUESTION  
PART  
REFERENCE**Answer space for question 5****Turn over ►**

The line  $l$  passes through  $A$  and has equation  $\mathbf{r} = \begin{bmatrix} 3 \\ 2 \\ 10 \end{bmatrix} + \lambda \begin{bmatrix} 3 \\ 1 \\ -2 \end{bmatrix}$ .

- (a) Find the acute angle between  $l$  and the line  $AB$ .

**[4 marks]**

- (b)** The point  $C$  lies on  $l$  such that angle  $ABC$  is  $90^\circ$ .

Find the coordinates of  $C$ .

**[4 marks]**

- (c) The point  $D$  is such that  $BD$  is parallel to  $AC$  and angle  $BCD$  is  $90^\circ$ . The point  $E$  lies on the line through  $B$  and  $D$  and is such that the length of  $DE$  is half that of  $AC$ .

Find the coordinates of the two possible positions of  $E$ .

**Answer space for question 6**

This image shows a blank sheet of white paper designed for writing. It features a series of evenly spaced horizontal blue lines across its entire width. A single vertical red line runs down the left side, creating a narrow margin. The paper is otherwise completely empty, with no text or markings.

**Turn over ►**

**7** A curve has equation  $y^3 + 2e^{-3x}y - x = k$ , where  $k$  is a constant.

The point  $P\left(\ln 2, \frac{1}{2}\right)$  lies on this curve.

**(a)** Show that the exact value of  $k$  is  $q - \ln 2$ , where  $q$  is a rational number.

**[1 mark]**

**(b)** Find the gradient of the curve at  $P$ .

**[6 marks]**

QUESTION  
PART  
REFERENCE

**Answer space for question 7**

QUESTION  
PART  
REFERENCE**Answer space for question 7****Turn over ►**

- 8 (a)** A pond is initially empty and is then filled gradually with water. After  $t$  minutes, the depth of the water,  $x$  metres, satisfies the differential equation

$$\frac{dx}{dt} = \frac{\sqrt{4+5x}}{5(1+t)^2}$$

Solve this differential equation to find  $x$  in terms of  $t$ .

**[7 marks]**

- (b)** Another pond is gradually filling with water. After  $t$  minutes, the surface of the water forms a circle of radius  $r$  metres. The rate of change of the radius is inversely proportional to the area of the surface of the water.

- (i)** Write down a differential equation, in the variables  $r$  and  $t$  and a constant of proportionality, which represents how the radius of the surface of the water is changing with time.

(You are not required to solve your differential equation.)

**[3 marks]**

- (ii)** When the radius of the pond is 1 metre, the radius is increasing at a rate of 4.5 metres per second. Find the radius of the pond when the radius is increasing at a rate of 0.5 metres per second.

**[2 marks]**
